

# e-SV Series SPECIAL VERSIONS

ErP 2009/125/CE

## Xylect

Xylect is a pump selection software with an extensive online database of product information across the entire range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

Xylect is available:  
On the website – [www.xylect.com](http://www.xylect.com)

For more information, please, see page 219-220.

## Ecodesign Directive 2009/125/CE

The **Directive 2005/32/EC** on energy-using products (**EuP**) and the subsequent **Directive 2009/125/EC** on energy-related products (**ErP**) established the ecodesign requirements for products to reduce their energy consumption and consequently their environmental impact.

These requirements apply to products placed and used in the European Economic Area (European Union plus Iceland, Liechtenstein and Norway) as a stand-alone unit or as integrated parts in other products.

The table shows the Regulations that define the requirements for Lowara products:

Product	Regulations	From	Target
Pumps*	(EU) N. 547/2012	1 January 2015	<b>MEI</b> ≥ 0,4
Circulators**	(EC) N. 641/2009, (EU) N. 622/2012 e (EU) 2019/1781	1 August 2015	<b>EEI</b> < 0,23
Electric motors	(EU) 2019/1781 e 2021/341	1 July 2021	<b>IE2</b> : three-phase motors with a rated output ≥ 0,12 and < 0,749 kW <b>IE3</b> : three-phase motors with a rated output ≥ 0,75 and < 1000 kW
Variable speed drives (VSD)***	(EU) 2019/1781 e 2021/341	1 July 2021	<b>IE2</b>

\* some types of pump, used for pumping clean water.

\*\* circulators with a rated hydraulic output power of between 1 and 2500 W, designed for use in heating systems or in secondary circuits of cooling distribution systems.

\*\*\* variable speed drives with three-phase input and rated output power from 0,12 kW up to 1000 kW, rated for operating with motor included in the same regulations.

From 1 July 2023 it will be introduced additional requirements.

# INTRODUCTION

## e-SV SERIES - SPECIAL VERSIONS

### Introduction

Our customers are central to our business.

Many years of collaboration with them across the different markets and all over the world has taught us that specifically designed pumps are required to handle special applications or to fulfill particular installations. It is essential to ensure top performance of the systems and continuous quality of the production.

Therefore Lowara has developed a wide range of special versions of its vertical multistage e-SV to give an appropriate and dedicated solution to special applications and installations in the industry or in the building services market.

### Pump design

Non-self priming, vertical multistage, high pressure centrifugal pump, with suction inlet and outlet of the same identical nominal diameters, coupled to a standard motor. Horizontal installation also available, see specific section.

### Drive

**Without speed control:** Short circuit squirrel cage motor, totally enclosed, fan-cooled (TEFC), three-phase, 2 and 4 poles, efficiency class **IE2** (0,12-0,749 kW), **IE3** (three-phase 0,75 to 1000 kW). (IEC 60034-30). Single-phase version up to 2,2 kW (built-in automatically resettable overload protection up to 1,5 kW).

**With HYDROVAR™ speed control system:** A special version of e-SV which becomes an intelligent, variable speed system. Ideal for single pumping solution or multiple pumping set solution (up to 8 pumps).

**With e-SM drive speed control system:** e-SV Smart series is equipped with an intelligent control that optimizes hydraulic performance while minimizing waste. Ideal for single pumping solution or multiple pumping set solution (up to 3 pumps).

Consult the specific section for further motor options.

### Special versions and options index

The first part of this booklet will cover the following special versions:

- High Pressure
- Low NPSH
- High Temperature (150°C)
- High Temperature (180°C)
- 4-pole version
- Reducing footprint
- Horizontal Installation

The second part of this booklet will cover the following sections:

- Motors configuration and standard options
- Protection sensor against dry running
- Reports and declarations
- Accessories

### Documentation and support

Pump selection software, visit:

<http://www.xylect.com>

Documentation is also available on:

<https://www.xylem.com/en-uk/brands/lowara/>

Visit us for information including video, commercial leaflet, brochure, other technical catalogues, 2D and 3D drawings, IOM.

## e-SV SERIES - SPECIAL VERSIONS COMPATIBILITY MATRIX

The two highlighted digits identify the version (**F** = version, **L** = special version):

22SV0**FL**110T

The following table describes the recommended compatibility between the special versions of e-SV.

### Material: AISI 304

#### Round flanges (PN25) - F

	H	B	L	E	L+E
H	FH	-	FW	-	-
B		-	-	-	-
L			FL	-	-
E				FE*	-

#### Oval flanges (PN25) - T

	H	B	L	E	L+E
H	-	-	-	-	-
B		-	-	-	-
L			TL*	-	-
E				TE*	-

#### Discharge port above suction, round flanges (PN 25) - R

	H	B	L	E	L+E
H	RH*	-	-	-	-
B		-	-	-	-
L			RL	-	-
E				RE*	-

### Legend

**H** = High temperature version (150°C)

**B** = High temperature version (180°C)

**L** = Low NPSH version

**E** = Passivated and electropolished version

**L+E** = Low NPSH version, passivated and electropolished version

\* = Customizable, feasible as custom product

- = Not feasible

The following table describes the electrical and positioning possible configuration mix:

#### High temperature version (150°C) - H

	Hydrovar	e-SM drive	Horizontal	4 poles
Hydrovar	Y	N	*	N
e-SM drive		N	N	N
Horizontal			*	N
4 poles				N

#### High temperature version (180°C) - B

	Hydrovar	e-SM drive	Horizontal	4 poles
Hydrovar	Y	N	N	N
e-SM drive		N	N	N
Horizontal			N	N
4 poles				N

### Material: AISI 316

#### Round flanges (PN25) - N

	H	B	L	E	L+E
H	NH	-	NW	NI	NA
B		NB	NY	NS	ND
L			NL	NU	-
E				NE	-

#### Victaulic Couplings (PN25) - V

	H	B	L	E	L+E
H	-	-	-	-	-
B		-	-	-	-
L			VL*	VU	-
E				VE	-

#### High Pressure Victaulic Couplings (PN 40) - P

	H	B	L	E	L+E
H	-	-	-	-	-
B		-	-	-	-
L			PL*	PU	-
E				PE	-

#### Clamp Couplings DIN 3676 (PN 25) - C

	H	B	L	E	L+E
H	-	-	-	-	-
B		-	-	-	-
L			CL*	CU	-
E				CE	-

#### Threaded Couplings DIN 11851 (PN 25) - K

	H	B	L	E	L+E
H	-	-	-	-	-
B		-	-	-	-
L			KL*	KU	-
E				KE	-

#### Low NPSH version - L

	Hydrovar	e-SM drive	Horizontal	4 poles
Hydrovar	Y	N	Y	Y
e-SM drive		Y	Y	N
Horizontal			Y	Y
4 poles				Y

#### Passivated and electropolished version - E

	Hydrovar	e-SM drive	Horizontal	4 poles
Hydrovar	Y	N	Y	Y
e-SM drive		Y	Y	N
Horizontal			Y	Y
4 poles				Y

As a global supplier, Lowara can design specific solutions according to the requirements of the application or of the installation. For example, Lowara's custom-built solutions can handle more aggressive liquids or heavy duty applications. For more information, refer to the sales network.

## e-SV SERIES PUMPS (ErP 2009/125/EC)

With the “Energy using Products” (EuP 2005/32/EC) and “Energy related Products” (ErP 2009/125/EC) directives, the European Commission has established requirements for promoting the use of products with low power consumption.

Among the various products considered there are also some typologies of pumps with the characteristics defined by the specific **Regulation (EU) n. 547/2012** implementing the requirements of Directives EuP and ErP.

For vertical multi-stage pumps (MS-V for the Regulations), the efficiency evaluation refers to:

- just the pump and not the pump and motor assembly (electric or combustion);
- pumps with a nominal pressure PN not higher than 25 bar (2500 kPa);
- pumps designed to operate at a speed of 2900 min<sup>-1</sup> (for electric pumps this means 50 Hz 2-pole electric motors);
- pumps with a maximum flow of 100 m<sup>3</sup>/h;
- use with clean water at a temperature ranging from -10°C to 120°C (the test is performed with cold water at a temperature not higher than 40°C).

The Regulation also establishes the following deadlines:

from	minimum efficiency index (MEI)
1st January 2015	MEI ≥ 0,4

### Regulation (EU) n. 547/2012 – Annex II – point 2 (Product information requirements)

1) Minimum efficiency index (50 Hz):

- e-SV High Pressure: not included in the sphere of application of the Regulations.
- e-SV Low NPSH: see the MEI column in the tables in the *Weights and dimensions at 50 Hz, 2 poles* section.
- e-SV High Temperature (...150°C or ...180°C): see the MEI column in the tables in the *Hydraulic Performance at 50 Hz, 2 poles* section.
- e-SV 4-pole version: not included in the sphere of application of the Regulations.
- e-SV Reducing Footprint: see the MEI column in the table in the *Hydraulic performance at 50 Hz, 2 poles* section.
- e-SV Horizontal installation: see NOTE (50 Hz) in the *Operating characteristics* section.

2) “The benchmark for most efficient water pumps is MEI ≥ 0,70”.

3) Year of manufacture: from January 2013.

4) Manufacturer: Xylem Service Italia srl - Reg. No. 07520560967 - Montecchio Maggiore, Vicenza, Italy.

5) Product type identification:

- e-SV High Pressure: not included in the sphere of application of the Regulations.
- e-SV Low NPSH: see the PUMP TYPE column in the tables in the *Weights and dimensions at 50 Hz, 2 poles* section.
- e-SV High Temperature (...150°C or ...180°C): see the PUMP TYPE column in the tables in the *Hydraulic Performance at 50 Hz, 2 poles* section.
- e-SV 4-pole version: not included in the sphere of application of the Regulations.
- e-SV Reducing Footprint: see the PUMP TYPE column in the table in the *Hydraulic Performance at 50 Hz, 2 poles* section.
- e-SV Horizontal Installation: see the NOTE (50 Hz) in the *Operating characteristics* section.

6) Hydraulic pump efficiency with trimmed impeller: not applicable to these products.

7) Pump performance curves, including the performance curve:

- e-SV High Pressure: not included in the sphere of application of the Regulations.
- e-SV Low NPSH: see the *Operating Characteristics at 50 Hz, 2 poles* graphs.
- e-SV High Temperature (...150°C or ...180°C): see the table in the *Hydraulic Performance at 50 Hz, 2 poles* section.
- e-SV 4-pole version: not included in the sphere of application of the Regulations.
- e-SV Reducing Footprint: see the table in the *Hydraulic Performance at 50 Hz, 2 poles* section.
- e-SV Horizontal Installation: see the NOTE (50 Hz) in the *Operating characteristics* section.

8) “The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter”.

9) “The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system”.

10) Information relevant for disassembly, recycling or disposal at end-of-life: observe the current laws and by-laws governing sorted waste disposal. Consult the product operating manual.

11) “Designed for use below – 10 °C only”: note not applicable to these products.

12) “Designed for use above 120 °C only”: note not applicable to these products.

13) Specific instructions for pumps as per points 11 and 12: not applicable to these products.

14) “Information on benchmark efficiency is available at”: [www.europump.org](http://www.europump.org) (Ecodesign section).

15) The benchmark efficiency graphs with MEI = 0.7 and MEI = 0.4 are available at [www.europump.org/efficiencycharts](http://www.europump.org/efficiencycharts) (refer to “Multistage Vertical 2900 rpm”).

tab-comp-en\_a\_tm

The above table indicates the compatibility of materials depending on the pumped liquid. Check the specific weight of the liquid or the viscosity as this could affect the power input of the motor and hydraulic performance. For further details, please contact the sales network.

# **HIGH PRESSURE (50/60 Hz)**

## e-SV SERIES - HIGH PRESSURE, DUAL PUMP SYSTEM 50/60 Hz

### Background and context

In the water treatment industry (Ultra or Nano filtration, reverse osmosis) in the washing and cleaning industry (High pressure washdown systems) or with boiler-feed application, high pressure is mandatory to ensure consistency in the performance of the systems. Therefore Lowara has developed e-SV High Pressure: a wide range of pumps and pump systems able to deliver robust and durable performances up to 40 bar.

### Benefits of e-SV HIGH PRESSURE

**Versatile range:** e-SV High Pressure is available in two different configurations: single pump solution or tandem pump solution (two pumps in series). If the inlet pressure value is already high, Lowara delivers a single pump able to withstand the high inlet pressure and deliver up to 40 bar pressure at the outlet. With applications where the high pressure has to be delivered starting from atmospheric pressure in the inlet, Lowara delivers the tandem solution able to deliver up to 40 bar pressure at the outlet of the system.

**Long lasting performances:** e-SV High Pressure benefits of a particular design of the sleeve to withstand the internal pressure without any limitation in the inlet pressure but with maximum 40 bar measured at the outlet. The specific balanced mechanical seal and the balanced design of the impeller and the hard material intermediate bush bearing allows e-SV withstanding up to 40 bar without stressing the motor and the pump components, with a direct consequence on the reduction of the life cycle cost.

**Easy installation and maintenance:** e-SV High Pressure in tandem system is composed of two identical standard e-SV High Pressure pumps making replacement easy and cost-effective. e-SV High Pressure in tandem has to be ordered as two single e-SV High Pressure pumps together with the specific accessories for the installation (see specific accessories section).

### Code identification

e-SV High Pressure design is identified with a "**P**" in the product codification of the whole e-SV range.

Example: 3SV13**P**015T

**P** = High Pressure version.

### Special features / product benefits

- **Double sleeve design** to withstand high pressure up to 40 bar.
- **Balanced standard mechanical seal** (EN12756) on all models. **Easy to replace, without removing the motor** from 5,5 kW.
- **Hard material intermediate bush bearing** (Tungsten Carbide) to improve lifetime and capacity of working in extreme conditions, available on all sizes.
- **Balanced impeller design** to reduce axial thrust for longer standard motor bearing life.
- Wide range of size to cover all requested duty points: from 1SV to 125SV.
- **IE2** efficiency level (three-phase 0,12-0,749 kW), **IE3** efficiency level (three-phase 0,75 to 1000 kW) **standard motors, 2-poles with blocked bearing to support maximum thrust without limiting inlet pressure.**

### Special configurations

e-SV High Pressure offers a wide range of configurations:

- Materials used: see the Materials section.
- Options for mechanical seals and gaskets: see the mechanical seals and gaskets section.
- Options for motors and configuration: see the motors section.
- HYDROVAR™ system included

## e-SV SERIES - HIGH PRESSURE 50/60 Hz

### Technical characteristics - Design

1: Double sleeve design for optimized resistance to pressure up to 40 bar.

2: Balanced mechanical seal to withstand high pressure.

### Operating characteristics for single pump

For the hydraulic performances of the single pump, please refer to the standard catalogue of e-SV.

# **LOW NPSH (50/60 Hz)**

## e-SV SERIES - LOW NPSH 50/60 Hz

### Background and context

In industrial applications, often pumps are exposed to heavy duty installations and conditions, such as pumping high temperature liquids (boiler-feed), poor inlet pressure conditions or high flow rate applications. In these cases, constant and durable pump operation is often compromised by cavitation. Therefore Lowara has developed e-SV Low NPSH versions: a pump which delivers a definitive and valuable solution to solve cavitation issues in installation.

### Benefits of e-SV Low NPSH

**Consistent operation:** the special design of the first initial stage together with a specific impeller design allows e-SV Low NPSH versions to improve its suction capacity. Even in critical suction conditions, the pump is able to deliver consistent and constant operation on the whole application range.

**Long lasting performances:** e-SV Low NPSH design ensures consistency in its operation. The specific design of e-SV Low NPSH versions saves the pump of the cavitation: the components in the pump are not submitted to stress, decreasing the need of repetitive maintenance and reducing the life cycle cost of the pump.

**Easy installation:** e-SV Low NPSH versions is easy to install and allows saving space. Where traditional pumps will need to have a tank to facilitate the suction conditions, the specific design of e-SV Low NPSH version allows installing the pumps without any additional accessories on the suction side. A compact design where reduced spaces are favored.

### Code identification

e-SV Low NPSH design is identified with a "L" in the product codification of the whole e-SV range.

Example: 3SV13FL015T

**L** = Low NPSH version.

### Special features / product benefits

- **Specific first stage design** to maximize suction conditions.
- **Standard mechanical seal** (EN12756) fitted on all models. **Easy to replace without removing the motor** from 5,5 kW.
- **Hard material intermediate bush bearing** (Tungsten Carbide) to improve lifetime and capacity of working in extreme conditions, available on all sizes.
- **Balanced impeller design** to reduce axial thrust for longer standard motor bearing life.
- **Wide range of sizes to cover all requested duty points:** from 1SV to 66SV.

### Special configurations

- e-SV Low NPSH offers a wide range of configurations:
- Materials used: see the Materials section.
  - Options for mechanical seals and gaskets: see the mechanical seals and gaskets section.
  - Options for motors and configuration: see the motors section.
  - HYDROVAR™ system included

**e-SV SERIES - LOW NPSH  
50/60 Hz**

**Technical characteristics - Design**

- 1: Specific initial impeller design to maximize suction abilities.
- 2: Specific initial stage design to enhance suction capabilities of the pump.

REF	DESCRIPTION
④	Power absorbed by the standard stage (PStandard)
⑤	NPSH curve of standard pump
⑥	NPSH curve of Low NPSH pump

The total absorbed power is calculated by the following formula:  
 $P_{pump\ total} = P_{Low} + P_{standard} \times (n. \text{ of stage} - 1)$

### 1SV..L SERIES - LOW NPSH - 3 TO 15 STAGES DIMENSIONS AND WEIGHTS AT 50 Hz, 2-POLE

05902\_C\_DD

PUMP TYPE	MOTOR		DIMENSIONS (mm)								PN bar	MEI $\geq$ (1)	PESO kg

## e-SV SERIES - HIGH TEMPERATURE (...150°C) 50/60 Hz

### Background and context

In industrial applications pumps often have to deal with liquids at high temperatures in order to optimise performance for each production process. In these applications, pumps frequently need to be protected from excessive temperatures for the purpose of maintaining high performance levels. That's why Lowara has developed the e-SV High Temperature series: this sturdy pump integrates a mechanical seal normalised with suitable materials for pumping liquids at high temperatures.

### Benefits of the e-SV High Temperature 150°C series

#### Long-term mechanical seal performance:

Thanks to the special design of its housing, the seal is protected from the stress caused by high temperatures by means of a "natural" lubrication process which is triggered by the pumped liquid itself. Furthermore, the balanced mechanical seal and the high quality of the elastomers used in the e-SV High Temperature series assure excellent long-term performance, even in the harshest operating conditions.

**Solidity:** e-SV High Temperature pumps are hard-wearing thanks to the hard metal bush supports which can withstand high temperature applications up to 150°C and pressure values up to 25 bar (see the pressure-temperature diagram).

#### Easy and cost-effective maintenance:

the mechanical seal installed in e-SV High Temperature pumps is a standard balanced mechanical seal (EN12756) which makes it cheap and easy to replace.

### Identification code

e-SV High Temperature models are identified by the letter "H" in the standard identification code of the e-SV product range.

Available in the following versions:

**FH** in AISI 304 (for 1-22SV).

**GH** in AISI 304/Cast iron (for 33-125SV).

**NH** in AISI 316 (for all versions).

Example: 3SV13**FH**015T

**H** = High Temperature.

### Special features / benefits

- **Special design of the mechanical seal chamber** for high temperature applications.
- **Standard mechanical seal** (EN12756) fitted on all models. **Easy to replace without removing the motor** from 5,5 kW up.
- **Hard metal intermediate bush support** (tungsten carbide) to increase the duration and capability of operating in extreme conditions, available on all sizes.
- **Balanced impeller design** to reduce axial thrust and extend the lifetime of standard motor bearings.
- **IE2** efficiency level (three-phase 0,12-0,749 kW), **IE3** efficiency level (three-phase 0,75 to 1000 kW) **standard motors**, 2-poles with blocked bearing **to support maximum thrust without limiting inlet pressure.**

### Special configurations

A wide range of configurations is available for e-SV High Temperature pumps:

- Materials used: see the Materials section.
- Options for mechanical seals and gaskets: see the mechanical seals and gaskets section.
- Options for motors and configuration: see the motors section.

**e-SV SERIES - HIGH TEMPERATURE (...150°C)  
50/60 Hz****Technical specifications - Design**

- 1: Special design of the mechanical seal chamber, assuring adequate lubrication triggered by the pumped liquid, thus extending product lifetime.
- 2: Balanced mechanical seal in order to withstand high pressures and temperatures.

**Operating characteristics**

For the hydraulic performances, please refer to the standard catalogue of e-SV.

→ Route of pumped liquid.

(1) 1, 3, 5, 10, 15, 22SV Value referred to the F, T, N versions. R, V, C, K and P versions excluded.  
 33, 46SV Value referred to the N version with PN ≤ 25 bar (2500 kPa). G, P versions and N version with PN > 25 bar (2500 kPa) are excluded.  
 66, 92SV Value referred to the N version. G and P versions excluded.

**HIGH  
TEMPERATURE  
"BOILER"  
...180°C  
(50/60 Hz)**

## e-SV SERIES - HIGH TEMPERATURE "BOILER" (...180°C) 50/60 Hz

### Background and context

In applications where industrial boilers are used, pumps often have to deal with liquids at high temperatures. In these installations, pumps need to be specifically cooled down from excessive temperatures in the mechanical seal area, in order to ensure high performance levels. That's why Lowara has developed the e-SV "Boiler". This pump has a standard mechanical seal which extends its lifetime even when pumping liquids at very high temperatures.

### Benefits of e-SV "Boiler"

#### Long-term mechanical seal performance:

Thanks to the special design of its housing, the seal is protected from the stress caused by high temperatures by means of a "natural" lubrication process which is triggered by the pumped liquid itself, and a cooling system which uses the air in the room. A degasser is also installed at the top of the pump in order to automatically eliminate the air in the seal area. The temperature decreased to 100°C in the mechanical seal area, together with the balanced mechanical seal and the high quality of the elastomers of the e-SV "Boiler" pump, assure excellent long-term performance, even in the harshest operating conditions.

**Solidity:** e-SV "Boiler" pumps are designed to operate in any application at temperatures up to 180°C and pressures up to 25 bar. Pump body and upper chamber in cast AISI 316, balanced mechanical seal, high quality elastomers, hard metal bush supports, double outer jacket: these are the key features of the e-SV "Boiler". To select the correct pump, consult the pressure-temperature diagram.

**Easy and cost effective maintenance:** the mechanical seal installed in e-SV "Boiler" pumps is a standard balanced mechanical seal (EN12756) which makes it cheap and easy to replace.

### Identification code

e-SV "Boiler" models are identified by the letter "B" in the standard identification code of the e-SV product range and are available in AISI 316.

Example: 3SV13NB015T

**B** = "Boiler".

### Special features / benefits

- **Special design of the final stage of the pump and of the mechanical seal chamber** for high temperature applications.
- **Pump body and upper chamber in cast AISI 316.**
- **Stainless steel PN25 degasser.**
- **Hard metal intermediate bush support** (tungsten carbide) to increase the duration and capability of operating in extreme conditions, available on all sizes.
- **Balanced impeller design** to reduce axial thrust and extend the lifetime of standard motor bearings.
- **Double outer jacket** to withstand pressures of up to 25 bar and temperatures of up to 180°C.
- **IE2 efficiency level** (three-phase 0,12-0,749 kW), **IE3 efficiency level** (three-phase 0,75 to 1000 kW **standard motors**, 2-poles with blocked bearing **to endure extreme thrusts without limiting inlet pressure.**

### Special configurations

A wide range of configurations is available for e-SV "Boiler" pumps:

- Materials used: see the Materials section.
- Options for mechanical seals and gaskets: see the mechanical seals and gaskets section.
- Options for motors and configuration: see the motors section.

## e-SV SERIES - HIGH TEMPERATURE "BOILER" (...180°C) 50/60 Hz

### Technical specifications - Design

- 1: Balanced mechanical seal in order to withstand high pressures and temperatures.
- 2: Special upper chamber design with recirculation of the air in the room which lowers the temperature of the mechanical seal.
- 3: Degasser to eliminate the air in the mechanical seal area.
- 4: Double outer jacket design to withstand high pressures.

### Operating characteristics

For the hydraulic performances, please refer to the standard catalogue of e-SV.

→ Route of pumped liquid.

For hydraulic performance values, consult the standard e-SV™ catalogue

(1) 1, 3, 5, 10, 15, 22SV Value referred to the F, T, N, R versions. V, C, K and P versions excluded.

1-125sv-HERP-2p50-en\_b\_th

33, 46SV Value referred to the G and N versions with PN ≤ 25 bar (2500 kPa). G and N versions with PN > 25 bar (2500 kPa) and P version are excluded.

66, 92SV Value referred to the G, N versions. P version excluded.

# **4-POLE VERSIONS (50/60 Hz)**

## e-SV SERIES - 4-POLE VERSION 50/60 Hz

### Background and context

In the building services market, reducing the level of noise of the pumping equipment is one of the main goals of architects and facilities managers to bring more comfort to our life. In water boosting systems or in cooling and heating installations, often architects and contractors are looking at quiet operational systems. Therefore Lowara has developed the e-SV series with 4 pole versions: a pump which delivers a quiet and reliable solution to the most noise sensitive applications.

### Benefits of e-SV 4 pole

**Low level of noise:** e-SV 4 pole, by reducing the speed of the pump by 50% allows delivering very quiet operation.

**Wide range of performances:** e-SV 4 pole is available from 1SV to 125SV, from 0,25 kW to 15 kW.

The efficiency values of e-SV 4 pole are comparable to the e-SV series with 2 poles.

**Increased performance with HYDROVAR™:** e-SV 4 pole combined with HYDROVAR™, the variable speed driver developed by Lowara, allows an additional reduction of the noise of the pumping system. HYDROVAR™, by smoothing the ramping up and down of the pump, reduces the speed of the water in the piping and as a consequence the noise made by the full installation.

### Code identification

e-SV 4 pole version is identified with a "4" in the product codification of the whole e-SV range.

Example: 3SV11F002**4**T

**4** = 4 pole version.

### Special features / product benefits

- **Hard material intermediate bush bearing** (Tungsten Carbide) to improve life and ability to withstand heavy duty application on all sizes.
- **Supplied three-phase surface motors with IE2 efficiency level (for power < 0,75 kW) or IE3 efficiency level (for power ≥ 0,75 kW).**
- **HYDROVAR™ drive available on all models to allow e-SV 4 pole into an intelligent, variable speed system.** Ideal for single pumping solution or multiple pumping set solution (up to 8 pumps).
- **Standard mechanical seal (EN12756) fitted on all models. Easy to replace without removing the motor** from 5,5 kW up.

### Special configurations

e-SV 4 pole offers the same range of configuration of the standard e-SV series.

- Materials used: see the Materials section.
- Options for mechanical seals and gaskets: see the mechanical seals and gaskets section.
- Options for motors and configuration: see the motors section.
- HYDROVAR™ system included.

**125SV SERIES**  
**OPERATING CHARACTERISTICS AT 60 Hz, 4-POLE**

These performances are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

# **REDUCED OVERALL DIMENSIONS (50/60 Hz)**

## e-SV SERIES - REDUCED DIMENSIONS 50/60 Hz

### Background and context

In industry or in the building services market, reducing room of pumping equipment is one of the main goals of architects and manufacturing layout designers. They look for compact solutions which help to save space on installation, such as compact water supply installation, compact water booster sets and closed loop circuits. Therefore Lowara has developed e-SV Reduced dimensions: a pump or booster set which delivers a compact and original solution to the most critical footprint size.

### Benefits of e-SV Reduced dimensions

**Compact design:** e-SV Reduced dimensions offers up to 50% saving in the plant room dedicated usually for a traditional vertical multistage pump with suction and discharge ports designed inline.

**Versatile design:** e-SV Reduced dimensions offers many different configurations with the delivery port above the suction port with 4 adjustable positions. This specific design of the pump allows installing e-SV Reduced dimensions everywhere, even at a close proximity to a wall.

**High level performances:** e-SV Reduced dimensions keeps the same level of performances of the e-SV range from size 1SV to 22SV. e-SV Reduced dimensions is available with round flanges up to PN25.

### Code identification

e-SV Reduced dimensions design is identified with a "R" in the product codification of the whole e-SV range.

Example: 3SV13R015T

R = Reduced dimensions.

### Special features / product benefits

- Specific superposed design of the inlet and outlet allowing savings in up to 50% space.
- **Standard mechanical seal** (EN12756) fitted on all models. **Easy to replace without removing the motor** from 5,5 kW up.
- **Hard material intermediate bush bearing** (Tungsten Carbide) to improve life and ability to withstand heavy duty application on all sizes.
- **Balanced impeller design** to reduce axial thrust for longer standard motor bearing life.
- Wide range of size to cover all requested duty points: from 1SV to 22SV.
- **IE2** efficiency level (three-phase 0,12-0,749 kW), **IE3** efficiency level (three-phase 0,75 to 1000 kW) **standard motors**, 2-poles with blocked bearing **to support maximum thrust without limiting inlet pressure.**

### Special configurations

- e-SV Reduced dimensions offers the same range of configuration of the standard e-SV series.
- Materials used: see the Materials section.
- Options for mechanical seals and gaskets: see the mechanical seals and gaskets section.
- Options for motors and configuration: see the motors section.
- HYDROVAR™ system included.

# **HORIZONTAL INSTALLATION (50/60 Hz)**

## e-SV SERIES - HORIZONTAL INSTALLATION 50/60 Hz

### Background and context

In some applications where room is reduced vertically, it is mandatory to have some pumps systems able to deliver high pressure performances together with a limited occupied vertical space. Therefore Lowara proposes the full range of e-SV in the horizontal position: a pump which delivers from a vertical space saving solution together with the high performance of the e-SV series.

### Benefits of e-SV Horizontal

**Reduced use of the vertical space:** e-SV Horizontal reduces the space usually used vertically by the traditional vertical multistage pumps thanks to a specific range of accessories which allows the installation of the pump in a horizontal position.

**Easy installation:** any e-SV pumps can be installed in a horizontal position. Lowara has developed some specific accessories, which according to the pump model and motor, allow any e-SV multi-stage vertical pump to be installed horizontally.

**Motor construction design:** the horizontal installation is available for **motor with V18/B14 or V1/B5 construction design** (up to 11 kW), **B35 construction design** (from 15 kW and above).

### Code identification

There is no specific code identification for e-SV Horizontal, since it's a different installation of the standard e-SV series.

### Special features / product benefits

By being a different installation of the e-SV series, the special features and products benefits of e-SV Horizontal are the same as the standard e-SV series.

### Special configurations

e-SV Horizontal offers the same range of configuration of the standard e-SV series:

- Materials used: see the Materials section.
- Options for mechanical seals and gaskets: see the mechanical seals and gaskets section.
- Options for motors and configuration: see the motors section.
- e-SV version with discharge port above suction (**e-SV.R**)
- HYDROVAR™ system included.

### Operating characteristics

For hydraulic performance values, consult the standard e-SV catalogue.

### NOTE (50 Hz)

For information relative to the MEI index, hydraulic performance (Q, H, Pp, np) and anything other points concerning Regulation (EU) n. 547/2012, consult the standard e-SV catalogue.

# **MOTORS**

## **(50/60 Hz)**

## e-SV SERIES MOTORS AT 50 Hz (ErP 2009/125/EC)

From 1 July 2021 in accordance with the **Regulations (EU) 2019/1781 and 2021/341**, the three-phase 50 Hz, 60 Hz or 50/60 Hz **surface motors** with **power outputs ranging from 0,12 to 0,749 kW** must have a minimum level **IE2** efficiency; the ones with power outputs ranging **from 0,75 and 1000 kW** must have a minimum level of **IE3** efficiency.

From 1 July 2023, it will be introduced additional requirements.

The following tables also contain the mandatory information pursuant to Annex I, section 2, of the aforementioned Regulations.

- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- **IP55** protection degree.
- Insulation class **155 (F)**.
- Electrical performances according to EN 60034-1.
- **Supplied three-phase surface motors with IE2 efficiency level (for power < 0,75 kW) or IE3 efficiency level (for power ≥ 0,75 kW) as standard according to EN 60034-30:2009 and EN 60034-30-1:2014.**
- Metric cable gland according to EN 50262.
- PTC included in motors from 30 to 55 kW (one per phase, 155°C).

### Single-phase version:

220-240 V 50 Hz

Built-in automatic reset overload protection up to 1,5 kW. For higher powers the protection must be provided by the user.

Maximum ambient temperature: 40 °C.

### • Three-phase version:

220-240/380-415 V 50 Hz for power up to 3 kW.

380-415/660-690 V 50 Hz for power above 3 kW.

Overload protection to be provided by the user.

Maximum ambient temperature: 40°C or 50 °C, (depending on model and power)

### Standard options surface motors

In addition to a wide range of motors and special voltages, Lowara offers a wide range of standard options to cover all applications linked with the installation of the vertical multistage pumps e-SV:

#### Motor protection (three-phase)

PT100 temperature sensors (linear) in the windings

PTC temperature sensors in the windings

PTO bimetal thermal protectors in the windings

PTC in the bearings (only for larger motors)

#### Installation in harsh environments

Ambient temperature > 40°C (max. 60°C)

Protected to IP56 or IP65

Anti-condensation heaters

Tropicalisation

Protective canopy

Certification for marine use

Potentially explosive atmosphere (ATEX)

We reserve the right to supply motors from other brand to satisfy some of the requests.

## e-SV SERIES MOTORS AT 60 Hz (ErP 2009/125/EC)

Standard supplied SV electric pumps are equipped with standard motors.

- **Supplied three-phase surface motors with IE2 efficiency level (for power < 0,75 kW) or IE3 efficiency level (for power ≥ 0,75 kW) as standard according to EN 60034-30:2009 and EN 60034-30-1:2014.**
- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- IP55 protection degree.
- Insulation class 155 (F).
- Electrical performances according to EN 60034-1.
- Cable gland with metric according to EN 50262.
- PTC included in motors from 30 to 55 kW.
- **Single-phase** version:  
220-230 V 60 Hz  
with built-in automatic reset overload protection up to 1,5 kW. For higher powers the protection must be provided by the user.
- **Three-phase** version:  
220 V Δ, 380 V Y, 60 Hz up to 55 kW.  
Overload protection to be provided by the user.

### Standard options surface motors

In addition to a wide range of motors and special voltages, Lowara offers a wide range of standard options to cover all applications linked with the installation of the vertical multistage pumps e-SV:

#### High efficiency

Availability of UL (cURus) motor version for North American market (three-phase motors at 60 Hz).  
The UL motors meet the requirements of the Premium Efficiency of US Department of Energy.

#### Installation in harsh environments

Ambient temperature > 40°C (max. 60°C)  
Protected to IP56 or IP65  
Anti-condensation heaters  
Tropicalisation  
Protective canopy  
Certification for marine use  
Potentially explosive atmosphere (ATEX)

#### Approvals

UL recognized  
CSA

#### Motor protection (three-phase)

PT100 temperature sensors (linear) in the windings  
PTC temperature sensors in the windings  
PTO bimetal thermal protectors in the windings  
PTC in the bearings (only for larger motors)

#### Other:

Electrically insulated bearings  
Increased service factor (S.F. 1.15)

We reserve the right to supply motors from other brand to satisfy some of the requests.

## e-SV SERIES MOTOR NOISE AT 60 Hz

The tables below show the mean sound pressure levels (Lp) measured at 1 meter distance in a free field according to EN ISO 11203. The noise values are measured on 60 Hz motors and have a tolerance of 3 dB (A) according to EN ISO 4871.

### MOTORS AT 60 Hz, 2-POLE

POWER kW	MOTOR TYPE IEC SIZE*	NOISE LpA dB

s = Standard voltage    o = voltage upon request    - = Not available

sv-volt-low-a-en\_b\_te

For higher power motors special voltages available on request.

### Tolerances on nominal voltages

• **50 Hz:**

- ± 10% on the single voltage value shown on the rating plate.
- ± 5% on voltage range shown on the rating plate.

• **60 Hz:**

- ± 10% on the voltage values shown on the rating plate.

# **REPORTS AND DECLARATIONS**

## REPORTS AND DECLARATIONS

### i) Test reports

- a) **Factory Test Report** (Lowara identity code: 1A)  
(not available for all pump types; contact Customer Service in advance)  
- Test report compiled at the end of the assembly line, including flow-head performance test (ISO 9906:2012 – Grade 3B) and tightness test.
- b) **Audit Test Report** (Lowara identity code: 1B)  
- Test report for electric pumps compiled in the test room, comprising flow-head-pump input-pump efficiency performance test (ISO 9906:2012 – Grade 3B)
- c) **NPSH Test Report** (Lowara identity code: 1B / CTF-NP)  
(unavailable for submerged or submergible pumps)  
- Test report for electric pumps compiled in the test room, comprising flow-NPSH performance test (ISO 9906:2012 – Grade 3B)
- d) **Noise Test Report** (Lowara identity code: 1B / CTF-RM)  
(unavailable for submerged pumps)  
- Report indicating sound pressure and power measurements (EN ISO 20361, EN ISO 11203, EN ISO 4871) using the  
• intensimetric (EN ISO 9614-1, EN ISO 9614-2), or  
• phonometric method.
- e) **Vibration Test Report**  
(unavailable for submerged or submergible pumps)  
- Report indicating vibration measurements (ISO 10816-1)

### ii) Declaration of product conformity with the technical requirements indicated in the order

- a) **EN 10204:2004 - type 2.1** (Lowara identity code: CTF-21)  
- does not include test results on supplied or similar products.
- b) **EN 10204:2004 - type 2.2** (Lowara identity code: CTF-22)  
- includes test results (materials certificates) on similar products.

### iii) Issue of a further EC Declaration of Conformity,

- in addition to the one accompanying the product, it comprises references to European law and the main technical standards (e.g.: MD 2006/42/EC, EMCD 2014/30/EU, ErP 2009/125/EC).

*N.B.: if the request is made after receipt of the product, communicate the code (name) and serial number (date + progressive number).*

### iv) Manufacturer's declaration of conformity

- relative to one of more types of products without indicating specific codes and serial numbers.

### v) Other certificates and/or documentation on request

- subject to availability or feasibility.

### vi) Duplication of certificates and/or documentation on request

- subject to availability or feasibility.

# **TECHNICAL APPENDIX**

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (\text{NPSHr} + 0.5) + h_f + h_{pv} \quad \textcircled{1}$$

where:

**$h_p$**  is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  **$h_p$**  is the quotient between the barometric pressure and the specific weight of the liquid.

**$h_z$**  is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.

**$h_f$**  is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.

**$h_{pv}$**  is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the  $P_v$  vapour pressure and the liquid's specific weight.

**0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4° C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

Water temperature (°C)	20	40	60	80	90	110	120
Suction loss (m)	0,2	0,7	2,0	5,0	7,4	15,4	21,5

Elevation above sea level (m)	500	1000	1500	2000	2500	3000
Suction loss (m)	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables "Flow resistance" of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~15°C  $\gamma = 1 \text{ kg/dm}^3$

Flow rate required: 25 m<sup>3</sup>/h

Head for required delivery: 70 m.

Suction lift: 3,5 m.

The selection is an 33SVG075T pump whose NPSH required value is 2 m at 25 m<sup>3</sup>/h.

For water at 15 °C

$$h_p = P_a / \gamma = 10,33\text{m}, h_{pv} = P_v / \gamma = 0,174\text{m} (0,01701 \text{ bar})$$

The  $H_f$  flow resistance in the suction line with foot valves is ~1,2 m.

By substituting the parameters in formula  $\textcircled{1}$  with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2 + 0,5) + 1,2 + 0,17$$

from which we have: 6,8 > 3,9

The relation is therefore verified.

## FLOW RESISTANCE

### TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate valve	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Foot check valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en\_b\_th

The table is valid for the Hazen Williams coefficient  $C=100$  (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

## VOLUMETRIC CAPACITY

Litres per minute l/min	Cubic metres per hour m <sup>3</sup> /h	Cubic feet per hour ft <sup>3</sup> /h	Cubic feet per minute ft <sup>3</sup> /min	Imperial gallon per minute Imp. gal/min	U.S. gallon per minute US gal/min

**FURTHER PRODUCT SELECTION  
AND DOCUMENTATION**  
**Xylect**

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

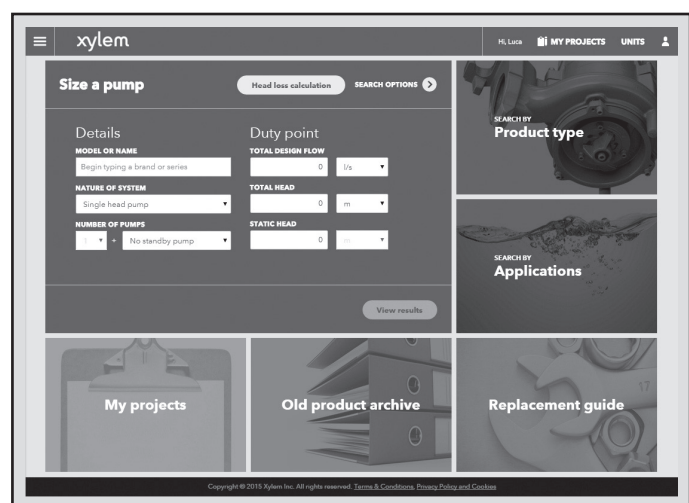

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

**FURTHER PRODUCT SELECTION  
AND DOCUMENTATION  
Xylect**

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every registered user has a space, where all projects are saved.

For more information about Xylect please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.

**For more information on how Xylem can help you, go to [www.xylem.com](http://www.xylem.com).**
